## Specializations within this programme

### Lighting Design

#### PROGRAM DESCRIPTION

The Lighting Design program was developed by high-class specialists of the University's [Creative Lighting Department](#) (CLD ITMO University). It is designed for creative thinkers searching for new forms and tools to work with space both in theory and practice. It is equally beneficial both for new students and practicing specialists interested in professional transformation in the field of lighting design and design of interactive and lighting technologies, and architectural spaces.

The program includes the following specializations:

- Urban Design
- Interactive Environment Design

Deadlines and more information [here](#)

### Smart Cities and Urban Studies

#### PROGRAM RELEVANCE

With the rapid growth of the urban population, the importance of urban studies as an independent field of knowledge is also increasing. More and more people in Russia start thinking about how to improve the quality of the urban environment and the effectiveness of managerial decisions. The rapid development of computer technology allows us to facilitate urban development processes, as well as make our cities more sustainable and comfortable to live in. This sets new standards for people involved in urban planning.

Developed at ITMO University's Institute of Design and Urban Studies, this educational program is aimed at training highly-qualified specialists ready to face the challenges posed by globalization.
