This programme involves the study of biological processes occurring in the human body, the mechanisms of disease manifestation, the possibilities for prevention and treatment, and the specifics of patient intake and care. Graduates of this course will become competitive professionals focused on the needs of the individual, society and the state thanks to professional teachers and the intellectual, cultural and moral traditions they uphold. Graduates will be able to choose their further professional paths by either starting to work in a hospital or by choosing one of the 70 residency programmes.
