Price: **210 300 Rub per year**

Programme webpage at the university website: <http://bio.tsu.ru/node/779>

Programme curator: **Danchenko A.M.**

Tel.: **83822529853**

E-mail: decan@bio.tsu.ru

This major is perfect for those people who strive to make city landscapes brighter, greener and more pleasant for townsfolk. Even though decorative crop production is usually associated with the simple planting around city buildings or parks, in reality is much more creative. The numerous project types, practice types, along with the professional possibilities available to someone with a background in landscape architecture are almost unlimited. From city parks to corporate buildings students who enter this program can design and implement solutions to make just about any space greener.

During their studies future specialists learn to organize and management suburban forests, to develop effective strategies and recommendations for preserving and improving the urban plants planning and of course to plan different recreation areas, sport zones, roads and footpaths.

Students also get a hands-on experience. They have a chance to turn their knowledge into practical ideas and plans during the internships. Students participate in broad range of practice in the university's Forest Institutions or other branches of the faculty.

As for the curriculum, the four-year undergraduate program consists of special disciplines like crop production, architectural graphics, landscaping and the fundamental subjects like botanic and soil sciences, geodesy and dendrology.

This program enables graduates to address environmental problems with interesting solutions and to create better and greener urban landscapes.
