This Master's programme is designed for training specialists, who will be able to work with complex economic objects and principles of creation of automated control systems for these objects.

Programme contents

The students are provided with fundamental knowledge in the area of modern informational technologies and programming methods in the field of applied computer science. The programme includes study of modern applied information systems, automated complexes for development, support, design and management of projects in the software industry. The students will receive information about advanced experience in this area and will obtain appropriate applied skills.

The programme's curriculum pays great attention to economic subjects. This is due to the fact that the graduates are most likely to face with automation of such economic activities as strategic planning of an enterprise, management of its finances, controlling, documentation manegments, and others.

The second part of the curriculum includes subjects related to computer science. It is subjects of informational and technological support of corporate activities, study of modern information technology and data warehousing, mathematical models of computer systems and computer networks and others.

Career

The graduates can work in several industries: they can conduct research activities in this or related areas, employed by state authorities and different industries, banks, insurance and investment funds.

Admissions

Only students with a higher educational diploma may submit application for this programme. The students shall be enrolled on a competitive basis according to the results of entrance examinations and interview.
