The program helps the students to form cultural and professional competences aimed at preservation and improvement of health by ensuring quality of medical treatment. The program is practice-oriented and trains specialists qualified to promote health of children and adolescents, prevent diseases, diagnose cases and pathological conditions, as well as provide first aid treatment for critical disease and in cases of emergency.

The program trains specialists in preventive, diagnostic and medical care. The students learn the skills required in the fields of rehabilitation, psychology and education, organization and management, as well as research.

The training is carried out using various educational technologies, interactive teaching methods, including visualization and simulation. During the studies, the interim attestation and the State Final Examination the instructors assess the level of knowledge and skills of the students and the graduates.
