Specializations within this programme

Banking

Economics (Accounting and Taxation)

The graduates are capable of accounting and management, organizing the transition to the new standards of accounting that are now being put into effect, analyzing financial and business activity, applying the best taxation practices. In the course of training, much attention is paid to mastering the information technologies that are necessary for a modern specialist.

The 3rd-4th-year students can combine studies with work at partner enterprises on a part-time basis. By the end of training, all graduates receive certificates on completing internships and courses provided by employers.

The programme is unique due to the fact that an important role in the educational process is played by the Department's participation in meetings of the Council and industry committees for the development of national accounting standards of the "National Accounting Regulator the Accounting Methodological Centre" Foundation, Moscow.

Corporate Economics (Service, Hotel Industry and Tourism)

Economics (Banking)

The aim of the program is to train future bank employees, to provide knowledge of banking technologies and tools, modern management methods and tools, traditional and innovative banking products, current trends in the financial sector.

International Accounting, Auditing and Financial Reporting Standards

Economics (Business Economics)

The programme comprises of a complex approach towards teaching students the principles of organizing efficient business processes: from the starting point to the moment of achieving the target indicators. Students gain knowledge on the principles of business organization, further strategic management, the role of the legislative framework in the regulation of business processes.

Moreover, the students gain competencies relevant to the current state of the economy: they learn to organize their own start-up projects, using the resources of the entrepreneurship grant support; to manage and sustainably develop a business in the context of an unstable economy; to find reserves to increase the competitiveness of the company using innovative approaches to the business processes organisation.

Finance and Credit

Economics (Economics of a Firm)

The programme represents a new system approach to education and is targeted at motivated, ambitious students with high capacity for work, and determined to quickly build a successful career. It is designed considering the requirements of partner employers, such as MECHEL and Avuar Group of Companies, providing the following knowledge and skills: from cost management and product costing, to strategic and managerial analysis of the main business processes and study of the lean manufacturing economy. In the course of studying, an imitation of business environment is created, and students have a chance to create a model of real business in project-related teams.

The specialists from enterprises offer real cases, business games, master classes on relevant and interesting topics for each block of disciplines. All the practice classes are held in a new laboratory, in a creative and informal atmosphere. Regular meetings with successful and well-known entrepreneurs of our region have become a tradition within this programme.

The programme uses a project-based approach to studying; students from different departments participate in project groups. The main goal of the department project-based activity is the robotization of accounting processes.

Tax and Taxation
