Logopedics - is the study of problems of human speech development, methods of its prevention, detection and elimination by various means of special training and education. Speech therapy studies the causes, mechanisms, symptoms, structures of speech defects, and impacts of implementation of different corrective systems.

Logopedics- is a profile with integrated knowledge of various sciences - physiology, medicine, pedagogy, psychology and philology. Considering the wide variability and complexity of speech defect correction techniques this Bachelor program is based on three main units of studying plan: 1) biomedical, 2) psychological and pedagogical and 3) logopedic diagnostic and correction techniques.

Specializations within this programme

Logopedics

Logopedics is a component of the speech pathology science of persons with disabilities. A speech therapist works with people of all ages: from birth to an old age (preparing children for school, directly in schooling, while working with foreigners learning the correct pronunciation, speech recovery for people faced with diseases that resulted in its complete or partial loss).
