The goal of the program is to train specialists who possess general cultural and professional competencies as well as an understanding of foundational the fundamental problems of mathematical education. The goal seeks to prepare students for the development of new scientific research-based teaching methods and experimental verification and implementation in the practice of mathematical training for diverse groups of students.

The proposed educational program works towards the discovery of mathematics as a scientific knowledge in modern educational disciplines within the acquisition of scientific research methodologies in the sphere of math and mathematical education. It aims to prepare students ready to successfully resolve problems in the sphere of pedagogical, project, research, methodological, and cultural-outreach activities.
