E-mail: panchenko@petrsu.ru

The program offers basic training in the field of information technology and programming, as well as field-specific training. Students study functional programming, software testing methods, and software verification, analyze the requirements for software systems, and master the basics of software design. Students can choose some of the disciplines themselves, which allows them to build an individual learning path.

In addition to special skills, students learn how to effectively and professionally interact with customers and users, experts, and senior executives of companies.

There is a lot of practical training involved, which is conducted at various leading IT companies in the northwestern region of Russia.
