The education program trains the graduates for the work as engineers at forestry, woodworking and pulp and paper industries, motor transport enterprises and service stations, machine building enterprises, as well as at research and educational institutions.

The students learn modern systems of computer-assisted engineering, modern technologies in machine-building industry, technological advances in construction, operation and repair of modern local and foreign machines. They learn new technology and management systems, including systems with microprocessors, geographic information systems (GIS), and nanotechnologies. The students work and study on forestry machines (motor vehicles and tractors) and other technology machines.
