The program offers a broadly based training focused on the development and implementation of modern mathematical methods and information technologies. The acquired competence permits students to face various scientific, technological, economic and management challenges, such as computer modeling of processes, objects, phenomena; processing huge amount of data; processing and recognition of images; mathematical and information support of management and finance, etc.

The course is a balanced combination of fundamental mathematical training and practical skills training essential for application software development.

Members of the faculty are highly qualified and hold doctoral or candidate degrees.

Learning management systems, such as distance learning, are widely used in the provision of teaching.

The program allows undergraduates to start a career at leading research centers and IT-companies as well as to pursue graduate studies.
