The aim of the degree program is to create the conditions for students to acquire the necessary level of knowledge, skills and experience for the implementation of professional activities in the field of fire safety.

Program tasks:

- to provide insight into the goals and objectives of the professional activities of graduates;
- to ensure students' personality development by organisational and scientific means;
- to form readiness for industrial and technological, experimental research activities;
- to form readiness for the subsequent professional development in this area.

The area of the professional activity of the graduates includes a set of objects of professional activity aimed at creating and using systems and means of ensuring fire safety, preventing and extinguishing fires, minimizing the man-made impact on the environment, the preservation of human life and health through the use of modern technical means.

Competitive advantages: The Fire Safety specialist defines the means and methods to achieve fire safety in the process of developing, operating and designing equipment, buildings and structures, as well as in case of emergency (fire).

Employment: fire safety engineer, state fire supervision inspector, fire protection systems designer, safety engineer, fire and explosion safety laboratory worker.
