### **The aims of the degree program:**

the development of the students' personal qualities that contribute to their creativity, cultural growth and social mobility; dedication, organisation, diligence, responsibility, autonomy, citizenship, adherence to ethical values, tolerance, perseverance in achieving their goals; the formation of cultural and professional competencies that allow graduates to work successfully in their chosen field of activity and to be sustainable in the labour market.

### **Program tasks:**

- To form the graduates' vision of the goals and objectives of their professional activities;
- To ensure the formation of the graduate's personality by organisational and scientific means;
- to train to carry out survey, drawing and design, production and managerial activities;
- to foster the willingness for the subsequent professional development in the field of construction.

**Competitive advantages:** the student receives fundamental training in the construction of unique buildings and structures with the implementation of the competence approach and interactive teaching forms. Moreover, the program includes Construction of High-rise and Long-span Buildings and Structures specialization providing graduates with the broadest range of potential employers and positions. The objects of professional activity are industrial and civil buildings and structures from the simplest to the unique high-altitude and long-span.

The specialist's diploma provides the opportunity to continue education in postgraduate programs (PhD).

**Employment:** managerial positions at construction companies, state executive authorities, local governments, design and construction organisations.

## **Specializations within this programme**
