Students acquire knowledge of the norms of legal regulation in the field of fire safety, the activities of the fire department, the operation of systems and means of ensuring fire safety, emergency rescue equipment. They have the ability to apply methods for assessing the technological processes and related fire risks, calculating systems for fire-prevention automatics, developing operational and tactical documentation, operating firefighting equipment, etc. The program is focused on training specialists in the field of fire safety, for carrying out activities in units of the State Fire Service of the Emergencies Ministry of Russia, civil defense and emergency situations, design and service organizations, and at the facilities of the economy.

The uniqueness of the program lies in its applied nature and the integration of the theoretical and practical foundations of academic disciplines with the graduate's future professional activities.

The main advantage of the program is the ability to attract students to participate in events held by the EMERCOM of Russia in the Chelyabinsk region.
