The intensively developing oil and gas complex of the Far East currently covers its need for specialists, mainly at the expense of the western regions of the country. Expansion of existing and construction of new oil and gas facilities in the Far East revealed an urgent need for qualified specialists for operation, including the ESPO-2 pipeline system and the Sakhalin-Khabarovsk-Vladivostok gas transmission system.

The program trains specialists in the field of operation and maintenance of transport and storage facilities for oil, gas, and refined products. You will get acquainted with the equipment and technologies used in pipeline systems, pumping and compressor stations, tank farms, and oil depots.

Learn to identify the factors that determine the effective and safe operation of systems and equipment, monitor the state of the pipeline, and ensure the environmental safety of work.

## **Specializations within this programme**
