The program is designed for students who feel the strength and desire to study economics at the level required to work in analytical services or development departments of companies in the real sector, banking, investment and insurance companies, scientific organizations, the media, federal and regional departments.

The double-degree educational program in economics, jointly with the Higher School of Economics, is aimed at training highly qualified analysts for leading Russian and foreign companies operating in the Far East and the Asia-Pacific region, as well as government authorities, research centers, and universities. The educational process is based on fundamental training in the field of modern economic theory, mathematics, statistics, econometrics, as well as intensive study of the English language, applied disciplines, and active scientific and practical work.

The main principle for the implementation of the Program is to conduct key disciplines at the level adopted at the partner university - HSE. Each discipline of the "core" will be supervised by a leading teacher of the Higher School of Economics, whose area of responsibility includes: development of work programs together with the teachers of the FEFU; conducting orientation lectures, practices, and consultations for students; control of the activities of the subject group of teachers of the FEFU and their consulting; control of students' knowledge, as well as joint project management and FQP.

The program is aimed at achieving a qualitatively new level of training in the field of economics and will produce specialists not only with narrow professional knowledge but with research and analytical competencies, the demand for which is currently not satisfied not only in the business environment of regional markets and international companies. but also in the field of state and municipal administration.
